

OILY WASTE CANS

- The name is misleading, these containers are for use with any combustible waste material
- The self-closing lids reduce oxygen and stop a fire within the container, while the raised and ventilated base allows air to pass underneath dissipating heat and reducing the risk of spontaneous combustion
- Hand or foot operated floor standing and hand operated bench top versions available.

DRUM COVER

- This device allows you to convert an open head 205ltr steel drum into a fire safe container for combustible waste
- Simply fitted with the aid of a screw driver and a spanner.

ADDITIONAL INFORMATION

- Both types of cans are Factory Mutual approved and tested
- All items are covered by the manufacturers 10 year warranty.
